Piece: Sideboard

Subject: Fixing the Carcass Backs.

The carcass backs were made very slightly oversize so that I could plane them to fit. This ensure a good quality fit.

Once I had them fitted I need to glue the three bigger frames into the carcass. The smaller two backs are removable to aid in the fixing of the sideboard top to the carcass.

Before I glued the backs into place I finished them. I used some marking tape to protect the glue surface and removed once I had applied the finish.

To glue the backs into the carcass I used two 10kg weights to apply some pressure. It worked well.
